The dataset was found on the Tableu Software website. This is the link to the dataset:
http://www.tableausoftware.com/public/sites/default/files/OlympicAthletes_0.xlsx

The dataset shows information about various years Olympic athletes competed and their overall results. Specifically, it shows the following information about Olympic athletes:

- Type and amount of medals won – at a given Olympics, but not as a total
- The age of the athlete
- Name of the athlete
- Year they competed
- The data of the closing ceremony
- The sport which they competed in

The rows are Olympic athletes. However, each time the athlete participated in a different Olympics, they get a new entry. So, each row is not unique by athlete, but instead by athlete's competing year.
